

**AMENDMENTS TO THE CLAIMS:**

The listing of claims will replace all prior versions, and listings of claims in the application:

**LISTING OF THE CLAIMS**

1-20. (Canceled).

21. (Canceled).

22. (Currently Amended)                      The assembly of claim 2437, wherein the frame comprises first and second side rails attached to one another by a strut that is at least substantially perpendicular to the side rails.

23. (Canceled).

24. (Currently Amended)                      The assembly of claim 2437, further comprising a second roller rotatably mounted to the frame in spaced relation relative to the first roller, wherein the second roller mount is spaced from a lowermost end of the frame ~~a distance greater than the outer radius of a conventional roller.~~

25. (Currently Amended)                      The assembly of claim 2437, further comprising a standoff associated with the frame disposed above the fluid supply tube for inhibiting the fluid supply tube from contacting an undesired surface.

26. (Previously Presented)                      The assembly of claim 25, wherein the standoff is disposed at the uppermost end of the frame.

27. (Currently Amended)                      The assembly of claim 2437, further comprising highly flexible, high memory fluid supply line that selectively attaches to the fluid supply tube without the use of hand tools.

28. (Currently Amended)            The assembly of claim ~~24~~37, wherein the shield is disposed adjacent the first roller, ~~mount and is contoured to generally follow the shape of a portion of a conventional roller,~~ the shield further including two projections extending towards the first roller ~~mount~~, the projections being spaced from one another ~~a distance at least equal to about the length of a conventional roller.~~

29. (Currently Amended)            The assembly of claim 28, further comprising a second shield disposed adjacent the second roller ~~mount~~.

30. (Canceled).

31. (Canceled).

32. (Currently Amended)            The assembly of claim ~~34~~37, further comprising a fitting attached to the handle bar and at least one supply line attached to the fitting and communicating with the fluid supply ~~tubemember~~, wherein the fitting is adapted to receive an associated handle having an internal passage through which fluid travels and the fitting is adjustable so that the orientation of the associated handle is adjustable.

33. (Currently Amended)            The assembly of claim ~~24~~37, further comprising a drip guard selectively attached to the frame spaced from the second roller ~~mount~~ opposite the first roller ~~mount~~.

34. (Canceled).

35. (Canceled).

36. (Canceled).

37. (Previously Presented)      A low pressure fluid applicator system comprising:  
a fluid applicator assembly including  
a frame;  
a first roller rotatably mounted to the frame;  
a fluid supply member mounted to the frame including a discharge outlet, the fluid supply member being mounted spaced from the first roller and being adjustable with respect to the frame between at least a first position where fluid exits the discharge opening and flows over an outer surface of the fluid supply member toward the first roller and a second position where fluid exits the discharge opening and falls onto a surface to which fluid is to be applied;  
a handle bar pivotally connected to the frame;  
a handle attached to the handle bar.

38. (Previously Presented)      The assembly of claim 37, wherein the fluid supply member includes a polygonally shaped portion that is received in a complementarily shaped opening in the frame.

39. (Currently Amended)      The assembly of claim ~~47~~37, further comprising a fluid supply line, a valve and a fluid source, the fluid supply line being in communication with the fluid supply member and the fluid source, the valve being configured for selectively opening and closing the fluid supply line.

40. (Currently Amended)      The assembly of claim ~~37~~39, wherein the connection between the fluid supply line and the fluid supply member is a press on connection not requiring the use of hand tools.
